Listing / Product Page Name	MWO DW-393 G (some refer to it as GSS variant) Japan Electronics+3Dawlance+3Dawlance+3

Features & Functional Highlights

- **Grill + Microwave Combination:** Because it supports a grill mode, you can brown, crisp, or grill foods in addition to microwave heating.
 - **Auto / Pre-programmed Menus:** Comes with built-in recipes and menu functions for ease of use.
 - **Defrost / Jet / Weight Defrost:** Supports defrosting by weight or by time, and possibly “jet” modes for quick heating.
 - **Digital / Electronic Controls:** More flexible user interface than mechanical dials.
 - **Stainless Steel / Quality Control Panel & Finish:** The “SS control panel” is mentioned in sources, indicating a premium feel.
 - **Timer & Child Lock:** Safety & user convenience features.
-

Strengths, Possible Limitations & Things to Check

Strengths

- A good all-rounder: gives more flexibility than a solo microwave, thanks to the grill mode.
- Decent capacity (23 L) suitable for medium households.
- The 800 W microwave output is respectable for many cooking tasks — not too weak.
- Digital control / menus / extra features (defrost, timer, child lock) make it more user-friendly.
- Because it’s marketed by Dawlance and found in multiple official listings, spare parts and service support are more likely available.

Possible Limitations / What to Confirm

- Grill performance: some grill functions in microwave + grill combos are weaker than standalone grills — check how well it grills meats / vegetables in practical use.
- Power draw: during grill + microwave combined usage, total input power might spike — ensure your kitchen wiring / circuit can handle it.
- Ventilation & clearance: grilling emits more heat / smoke; make sure there’s sufficient clearance / airflow.
- Internal dimensions & turntable size: check the diameter of the rotating plate and cavity height so your cookware / dishes fit.
- Warranty, after-sales: confirm the warranty period (for magnetron, grill elements, circuit board) with your seller.
- Model variant mixups: “G / GSS / RG” naming may differ — check that the one you get matches the one you investigate (functions, power, finish).
